

## Construction machines

Elastomeric coatings applicable by spraying and by brush for non-stick and wear-protection linings.

Weatherproof, almost indestructible – the right choice to maintain your equipment investment.

### Fields of application:

- Concrete mixing trucks (chutes and hopper)
- Dump trucks (anti-adhesion coatings)
- Concrete pumps

- 1 If sticking is to be avoided – MetaLine liquid elastomers
- 2 Suitable for clay, sand, salt and granulates
- 3 “Spray gum coating” in liquid form for almost any thickness
- 4 Transparent protection for new devices – safe right from the very start
- 5 Unusual technical solutions for unusual equipment
- 6 Hardly any wear, easy to clean, noise-reducing
- 7 Video of a MetaLine 795 elastomeric non-stick coating inside a dumper

## Earthmoving Equipment

If it sticks like “glued”, wear resistant non-stick coatings are a preferred solution to get back the efficiency of earth moving equipment.

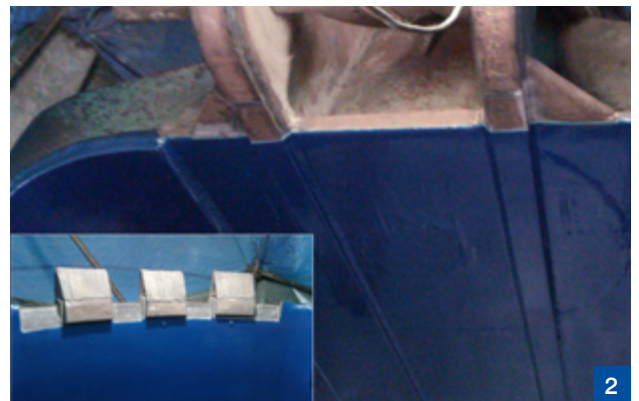

The shape of the tools have no elementary influence in the coating function – that’s MetaLine

### Fields of application:

- Excavators / loaders
- Excavator buckets (non-stick coatings)

- 1 Extremely difficult to realize – but without any alternative for drilling equipment
- 2 The smallest detail is of great importance – otherwise the coating will be off function
- 3 Just suitable for clay and other extremely sticky substances
- 4 As a besides effect: fully corrosion resistant and value maintaining
- 5 If worn out it is simply overcoated again – nothing more simple does exist
- 6 Non-stick, non-stick, non-stick – for other work, coated excavator buckets should not be used anymore
